WEBSITE & COLLEGE MANAGEMENT SYSTEM — PROJECT PROPOSAL

KIP COLLEGE

DIGITAL TRANSFORMATION PROPOSAL

A complete digital platform for KIP College — a modern public website, a self-service student portal, lecturer tools and a full administrative dashboard, unified in one secure system across all three campuses.

PREPARED FOR

Kitui Institute of Professionals (KIP College)

Main Campus · Wikililye, Mulango Road
Town Campus · Muli Mall Building · Mwingi Campus · Sunrise Building
Kitui Town, Kenya

OCTOBER 2026 · REF: KIP/WEB/2026/01

11. Why Choose Us **11**

12. Next Steps and Acceptance **12**

1. Executive Summary

KIP College (Kitui Institute of Professionals) stands at a decisive moment in its growth journey. With three thriving campuses, a portfolio of 28 academic programmes across Technical, Business and KASNEB streams, and a student community that grows every intake, the college now requires a digital presence and management platform that matches the quality of the education it delivers.

This proposal presents a complete, production-ready digital platform for the college: a modern public website that markets the institution professionally, a self-service student portal, a dedicated lecturer workspace, and a powerful administrative console — all unified in one secure, role-based system. The platform is already fully developed and demonstrated live; every screen referenced in this document is captured from the working system, not a mock-up.

Unlike conventional vendors who quote months of development from a blank page, we bring a finished, tested platform to the table. Deployment therefore takes weeks, not quarters, and the college can begin serving students online in the next intake cycle.

PROGRAMMES CATALOGUED	CAMPUSES ON ONE SYSTEM	USER PORTALS & ROLES	AI ASSISTANT AVAILABILITY

> **The bottom line:** one platform, three campuses, every stakeholder served — prospective students, current students, lecturers and management — with a blue-branded experience consistent with the college's identity.

2. About KIP College

KIP College is a tertiary learning institution headquartered in Kitui Town, Kenya, offering Technical, Business and KASNEB professional courses. The college prepares students for nationally recognised examinations under KNEC, CDACC, NITA and KASNEB examination bodies, and operates three campuses that serve the wider Kitui County region.

Each campus is a complete learning environment with lecture halls, computer laboratories, workshops and student amenities. The three campuses and their locations are profiled below, and each one is presented in depth on the proposed public website.

Campus	Location	Environment
Main Campus	Wikililye, Mulango Road	Flagship campus with workshops, computer labs and main administration

Campus	Location	Environment
Town Campus	Muli Mall Building, Kitui Town	Central-town campus, easily accessible for town-based students
Mwingi Campus	Sunrise Building, Mwingi	Serving Mwingi and the northern Kitui corridor

The academic offering spans three streams. **Technical courses** include engineering, ICT, catering, fashion and beauty programmes validated by KNEC, CDACC and NITA. **Business courses** cover accounting, business management, secretarial and hospitality management. **KASNEB professional courses** prepare students for Certified Accountant, Secretary and Investment analyst professional examinations. All 28 programmes, their fees structure, duration, intake months and entry requirements are catalogued in the proposed system.

3. The Challenge

The college's current website (kipskitui.com) presents a static, brochure-style presence. While it lists courses and contacts, it offers no interactive services, no student self-service, and no administrative capability. In a competitive tertiary education market, prospective students compare institutions online before they ever visit a campus.

Beyond marketing, day-to-day operations depend on manual, paper-driven processes that consume staff time and expose the college to avoidable risk:

- **No online admissions.** Applicants must travel to a campus to collect and return paper forms; the college loses applicants who expected to apply online.
- **Manual fee management.** Balances are tracked in spreadsheets and communicated on request; parents and students have no self-service visibility.
- **Paper results and transcripts.** Every statement of results, fee statement and student ID card is produced by hand when requested.
- **No central student records.** Student information, course registrations, timetables and learning materials live in separate documents across campuses.
- **Fragmented communication.** Announcements to students and staff rely on noticeboards and ad-hoc messages.

> Each of these gaps is closed by the proposed platform — out of the box, on day one of go-live.

4. The Proposed Solution

We propose a single, unified college management platform delivered as a modern web application. The system is organised into four experiences, each tailored to its users, all sharing one database and one design language in the college's blue brand colours.

Module	Who it serves	What it delivers
Public Website	Prospective students, parents, the public	Course catalogue, online applications, admissions guidance, campus profiles, news & events, downloads, FAQ, contact and AI chat assistant
Student Portal	Current students	Dashboard, fees & M-PESA payments, printable fee statements, results & transcripts, timetable, learning materials, digital ID card, AI Study Buddy
Lecturer Workspace	Teaching staff	Class rosters, marks entry, class analytics with grade distributions and pass rates
Admin Console	Registrar, finance, management	Institution-wide analytics, student records, admissions workflow, payments ledger, announcements, CSV exports, ID card printing

4.1 A Public Website That Sells the College

The new website replaces the static brochure with a modern, image-rich experience. It opens with a hero invitation — "Choose a path that matches your ambition" — and carries an accreditation strip for KNEC, CDACC, NITA and KASNEB, testimonials from alumni, and direct calls-to-action to apply online or enquire. All 28 programmes are presented with full fee breakdowns (tuition, registration and examination fees per term), durations, intake months and entry requirements, with filtering by Technical, Business and KASNEB categories.

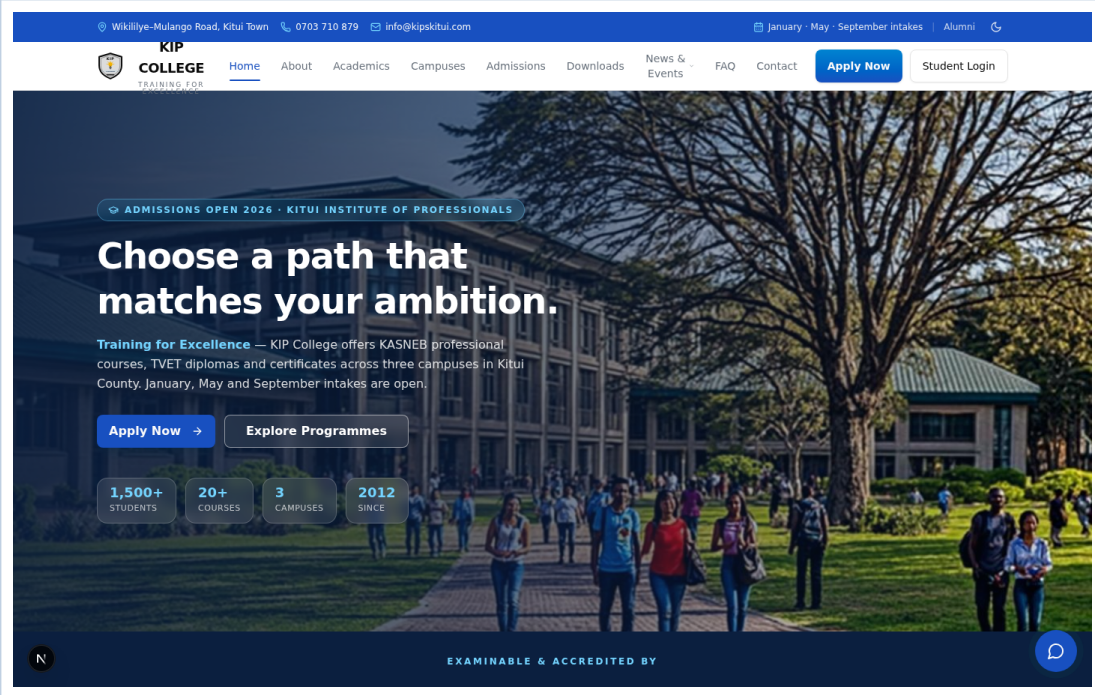

Figure 1 — The proposed public website homepage, captured from the live system.

4.2 Online Admissions

Prospective students complete a structured application form directly on the website: personal details, campus and course selection, previous education and guardian contacts. Applications land instantly in the administrative console where the admissions team reviews, accepts or declines them, and communicates the outcome. The full pipeline — pending, accepted, rejected — is tracked with analytics on the admin overview, eliminating paper forms entirely.

4.3 The Student Portal

Every enrolled student receives a secure account. On sign-in they see a personal dashboard: their course and year of study, today's classes, current fee balance, result summary and the latest announcements. From there students can pay fees by M-PESA or bank, download official fee statements, view and print their academic transcript grouped by term, browse the weekly timetable, download learning materials uploaded by lecturers, and print their official student ID card.

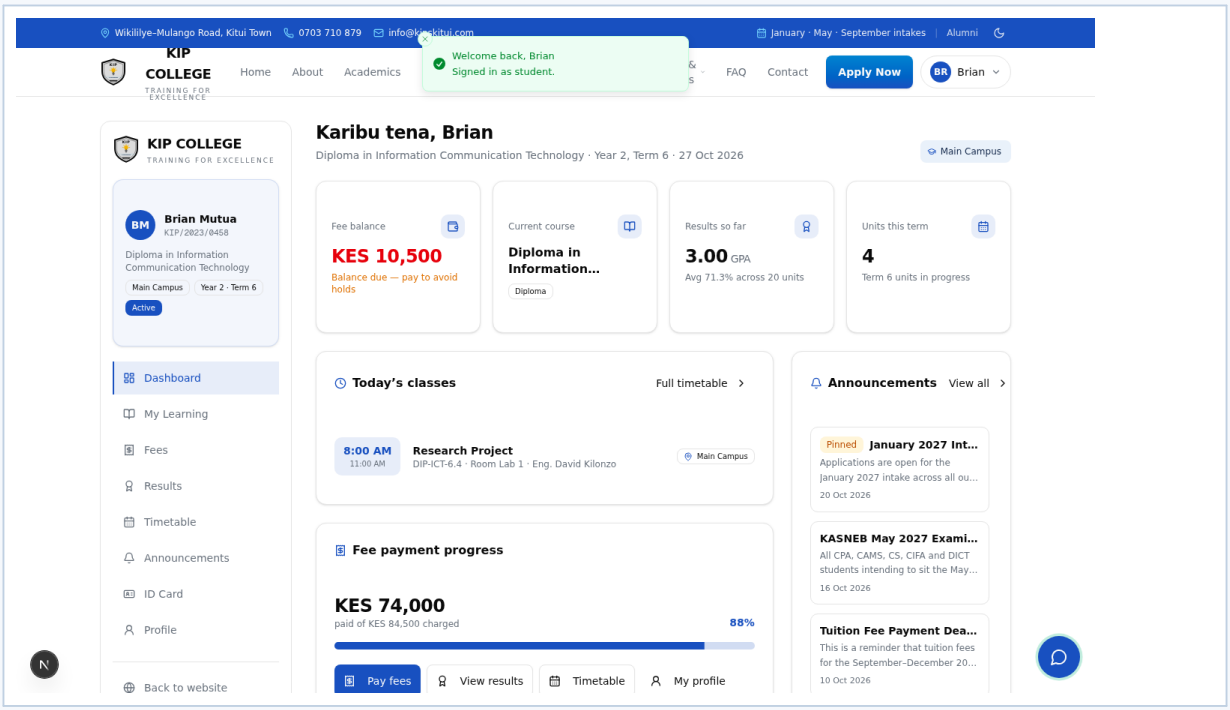

Figure 2 — Student portal dashboard: classes, fees, results and announcements at a glance.

Official documents are generated in print-ready form directly from the student's data: fee statements on college letterhead with a full ledger of charges and payments, and academic transcripts with every unit, mark, grade and the examination body of record. The digital student ID card carries the college crest, admission number, course, campus and validity period.

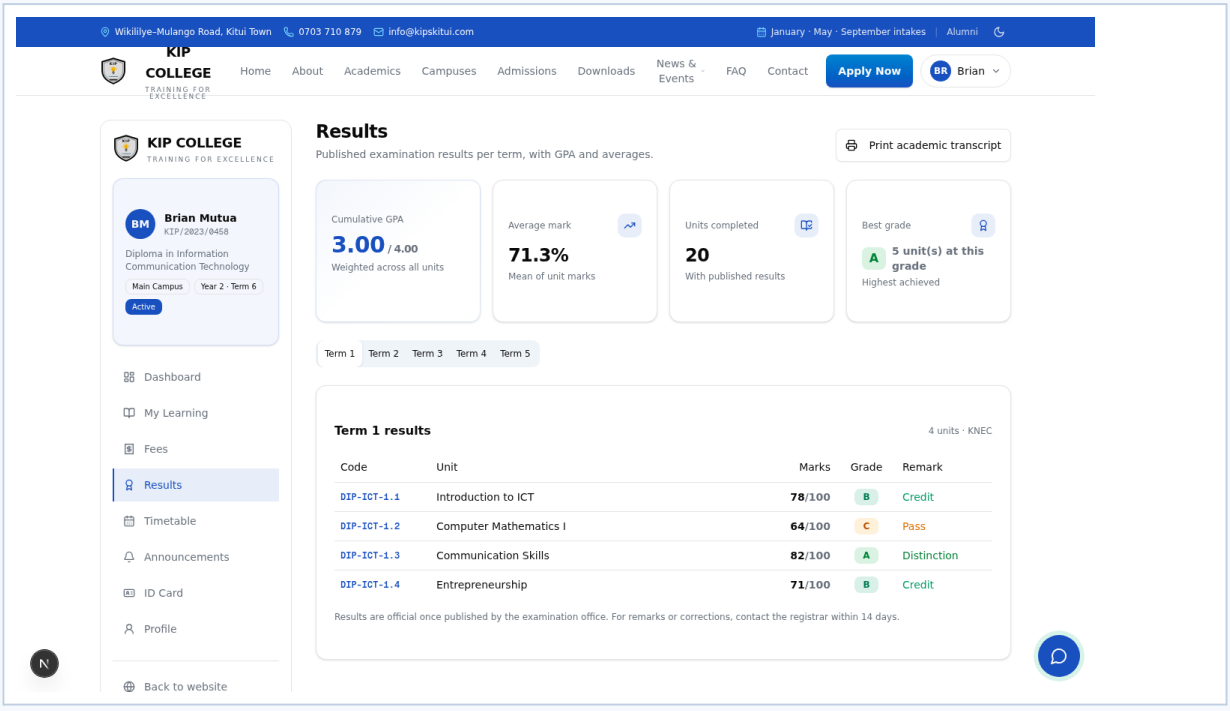

Figure 3 — Results view with printable official academic transcript.

4.4 The Lecturer Workspace

Lecturers sign in to a focused workspace listing the units they teach, the number of students in each, and today's teaching schedule. Marks entry is a guided form per unit; the system computes grades automatically. Class analytics show average, highest and lowest marks, pass rate and a grade distribution chart for every unit — giving teaching staff instant insight into how their classes are performing.

4.5 The Administrative Console

Management and administrative staff operate the whole college from one console. The overview presents live key performance indicators: enrolment, fee collection rate against billing, applications funnel, payment trends and campus distribution, with interactive charts. The registrar manages student records end-to-end; finance tracks every charge and payment with date-range filtering; announcements reach students, staff or everyone with one click; and five one-click CSV exports (students, payments, applications, results, outstanding balances) keep the college's books and audits painless.

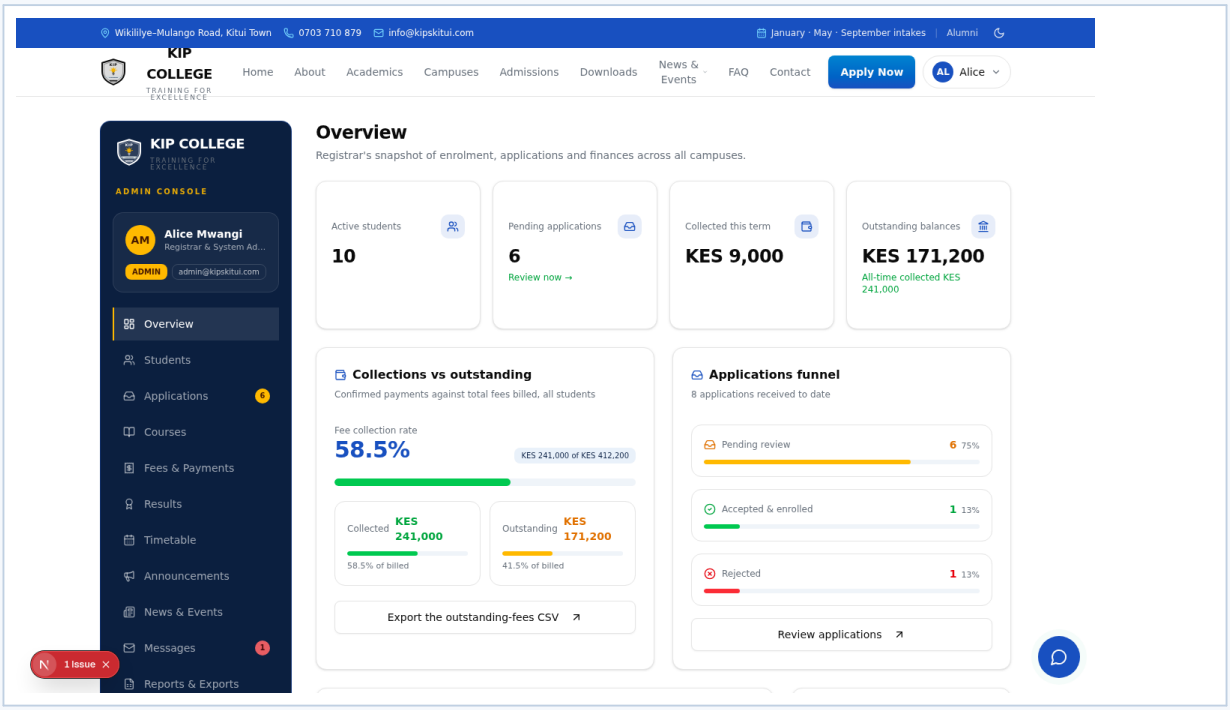

Figure 4 — Admin console overview: enrolment, collections and applications analytics.

4.6 AI-Powered Assistance

Two intelligent assistants are embedded in the platform, powered by large language models running securely on the server side. On the public website, an AI assistant answers visitor questions about courses, fees, intakes and campuses around the clock — drawing its answers from the live course database, so it never quotes stale fees. Inside the student portal, an AI Study Buddy knows the student's actual units and course materials and helps them revise: explaining concepts, generating practice questions and quiz drills for the exact syllabus they are studying.

> **Why this matters:** the website becomes a 24/7 admissions officer, and every student gets a personal tutor — features no competing college in the region offers.

5. Design and Branding

The platform is dressed in the college's own identity. The design system is built around the institution's blue — from the deep academic navy of official documents to the luminous royal blue of interactive elements — paired with a gold-tinged accent borrowed from the college crest. The college shield, motto ("Training for Excellence") and real contact details appear throughout.

- **Blue identity.** A complete colour system derived from the school's blue theme, consistent across website, portals, printables and ID cards.
- **Mobile-first and responsive.** The entire platform is engineered for the phone first — the device most students and parents will use — then enhanced for tablet and desktop.
- **Dark mode.** A full dark theme for evening study sessions and low-bandwidth comfort.
- **Accessible.** Semantic structure, keyboard navigation, screen-reader labels and minimum 44-pixel touch targets throughout.
- **Print-ready documents.** Fee statements, transcripts and ID cards are designed for standard printers, on letterhead, with clean page isolation.
- **Performance.** Modern framework, optimized images and local caching keep the site fast even on modest mobile connections.

6. Technology Stack

The platform is engineered on a modern, industry-standard technology stack chosen for reliability, security, performance and long-term maintainability. No exotic or proprietary components are used; any competent developer can maintain and extend the system after handover.

Layer	Technology
Frontend	Next.js 16 (App Router) with TypeScript, Tailwind CSS 4 and the shadcn/ui component library
Backend	Next.js API routes on Node.js — all business logic server-side, nothing sensitive in the browser
Database	Prisma ORM over SQL (SQLite in the demo, PostgreSQL in production for scale)
Security	Session-cookie authentication with bcrypt password hashing and role-based access (Admin, Lecturer, Student)

Layer	Technology
AI services	Server-side large language model SDK powering the public assistant and the student Study Buddy
Analytics and reporting	Interactive dashboards, CSV exports, print-ready statements, transcripts and ID cards
Hosting	Vercel or Netlify with a managed database and automatic HTTPS

The system is delivered as a complete codebase in a Git repository, deployed through modern continuous deployment. Content updates (news, events, downloads, FAQs) are data-driven and require no developer involvement.

7. Deliverables and Demo Access

Upon final delivery the college receives the complete platform, its source code, and the training to run it independently. A demonstration environment is available immediately, pre-loaded with representative data so that management can walk through every feature before committing.

#	Deliverable
1	Production deployment of the public website and the three management portals, on the college's domain with HTTPS
2	Complete source code in a GitHub repository, with documentation
3	Data migration of students, courses, fee structures and results into the live database
4	Administrator, lecturer and student accounts, with role-based training sessions
5	Official document templates: fee statements, transcripts, ID cards, on college letterhead
6	Operations manual and 30 days of hypercare support after go-live

The demonstration environment can be accessed immediately with the following accounts:

Role	Sign-in (email)	Password	What to explore
Administrator	admin@kipskitui.com	Admin@123	Analytics, students, admissions, payments, announcements, CSV exports, ID card printing
Lecturer	lecturer@kipskitui.com	Lecturer@123	Class lists, marks entry, class analytics
Student	student@kipskitui.com	Student@123	Dashboard, fee statement, transcript, timetable, materials, ID card, AI Study Buddy

8. Project Timeline

Because the platform is already built and demonstrated, the engagement focuses on configuration, data and handover rather than risky from-scratch development. Four weeks from acceptance to go-live:

Week	Milestone	Key activities
1	Foundation	Brand and content review with the college; domain and hosting setup; course and fee data confirmation
2	Deployment	Production deployment of website and portals; account creation for staff and students
3	Data and training	Migration of student records and fee balances; training sessions for admin, lecturers and student leaders
4	Go-live and hypercare	Public launch; 30-day hypercare window with priority fixes and tuning

9. Investment and Commercial Terms

The commercial structure follows the four modules of the platform. Each phase is discrete and independently valuable, allowing the college to proceed with confidence and clarity.

Phase	Scope	Investment (KES)
1	Public website: branding, full course catalogue, admissions, news, downloads, FAQ, AI assistant	15,000
2	Student and lecturer portals: fees and M-PESA, statements, transcripts, timetable, materials, ID cards, analytics	22,000
3	Administrative console: records, admissions workflow, payments ledger, announcements, reports and exports	18,000
4	AI Study Buddy and intelligent features integrated in the student portal	9,000
	Total one-time investment (complete platform)	64,000

Recurring item	Frequency	Amount (KES)
Hosting, domain and SSL certificate	Annual	10,000
Support, updates and maintenance	Annual (KES 3,000/month)	36,000

Payment milestone	Share	Trigger
Acceptance of proposal	50%	Signing of this document (KES 32,000)

Payment milestone	Share	Trigger
User acceptance testing	25%	College sign-off of deployed portals (KES 16,000)
Go-live and handover	25%	Public launch and documentation delivery (KES 16,000)

> **Good to know:** the platform is already complete — these figures cover deployment, migration, training and handover of a finished product, not speculative development. Pricing is negotiable for a phased rollout.

10. Support and Maintenance

A platform is only as good as its care after launch. The maintenance agreement keeps the system current, secure and evolving with the college's needs.

- Monthly platform updates: security patches, dependency upgrades and performance tuning.
- Priority bug fixes with defined response times during business hours.
- Content support for news, events, downloadable resources and course fee updates.
- Quarterly review meeting to align the roadmap with institutional goals.
- New feature development at preferential rates for maintenance clients.
- Data backups and disaster-recovery verification on a scheduled basis.

11. Why Choose Us

We combine full-stack engineering discipline with product thinking. The proof is the platform itself: every claim in this proposal can be verified live, today, from the demo accounts above.

- **A finished, demonstrated product.** Nothing in this proposal is a promise of future work — it exists, works and is captured in the figures above.
- **Modern engineering.** The same technology stack used by leading global platforms, delivered by an AI-engineering team.
- **Designed for Kenya.** M-PESA payments, KNEC/KASNEB/CDACC/NITA alignment, mobile-first design for real network conditions, and printables that work on ordinary office printers.
- **AI-native.** Embedded AI assistants are not an afterthought but core features — a regional first for a college platform.
- **Full ownership.** The college receives the complete source code and the freedom to extend the platform with any competent developer.

12. Next Steps and Acceptance

To proceed, we kindly ask the management of KIP College to review this proposal, explore the demonstration environment, and indicate acceptance. Upon signing, the four-week deployment clock starts immediately, targeting the next intake cycle for full digital operations.

Step	Action	Owner
1	Proposal review and demonstration walkthrough (on-site or virtual)	KIP College management
2	Signing of this proposal and the 40% commencement invoice	Both parties
3	Content, data and branding handover session	KIP College
4	Deployment, migration and training	Development team
5	Go-live and 30-day hypercare	Both parties
